

Low Range DNA Ladder

Range: 100 bp – 1000 bp

MADE IN DENMARK

Cat. No.: A610241

250 lanes of 2 µl

-	Low Range DNA Ladder
ID No.	5401200
Cap colour	Black
Content	1 x 0.5 ml

Features and General Description

Low Range DNA Ladder is a broad range dsDNA ladder with bands from 100 bp to 1000 bp (figure 1). The ladder can be used to quantitate the amount of DNA in a sample since the mass of DNA in each band in the ladder has been calibrated to range from 8 to 40 ng DNA.

The ladder is supplied in loading buffer, ready-to-use on agarose and polyacrylamide gels. It is suitable with TBE, TAE, SB and LB electrophoresis systems.

Suggestions for use of Low Range DNA Ladder

- **Important:** Mix ladder briefly before use. Do not heat the ladder.
- Load 1 µl to 5 µl of ladder per lane (for gel wells of ~5 – 10 mm width)
- Agarose gel electrophoresis: Prepare 1% gel. The dye should migrate 60 – 70% the length of the gel.
- Polyacrylamide gel electrophoresis: Prepare 8% gel. The dye should migrate approx. 90% the length of the gel.
- Ethidium bromide (0.5 µg/ml) is the recommended gel stain.

Storage, Stability and Shipment

Low Range DNA Ladder may be kept safely at room temperature for at least 3 months from date of shipment. Ladders are guaranteed for 12 months when stored at 4°C. Aliquot product if necessary to avoid repeated freezing and thawing cycles.

Shipped at ambient temperature. For long term storage, keep the DNA ladder at -20 °C for up to 3 years.

Quality control

Agarose gel analysis shows that all bands are present at the expected location and band intensity.

Figure 1: Low Range DNA Ladder. 2 µl Low Range DNA Ladder was loaded on a 1% agarose in 1x TAE and stained with ethidium bromide.
